

## Ecolift XL backwater lifting st. Duo, 2 motor flaps, SPF 3000-S1, Taper

## **Article information**

Item no.: 8741074 GTIN: 4026092070833

Price group: 60

## **Advantages**

- Wastewater drainage without interruption, even if a power failure occurs, as long as there is no backwater
- low pump use
- minimised noise emissions

## **Description**

The backwater lifting station for faecal and non-faecal wastewater is equipped with two submersible pumps, two motor-driven closure systems and a backflow preventer. The collection tank made of permanently resistant polymer (PE) has an enclosed pump tank. Quick-release closures enable the integrated components to be removed easily. The pipe cross-section is normally open and the water drains to the sewer via natural fall. Backwater is detected by an optical probe, which causes the closure systems to close automatically and there is no longer free passage to the sewer. During the backwater phase, the water drains via a pressure pipe, which carries the wastewater into the sewer. The pressure pipe is a welded PE pipe; with pump SPF 4500, the pressure pipe must also be continued up to a pressure release chamber. The station is controlled by a user-friendly control unit, which is optionally integrated in the building management system via a potential-free contact, or alarm and collective fault messages can be output via a GSM interface. A redundant control unit also provides additional safety. The KESSEL modular system provides different upper sections and engineering chamber options as accessories.

Variant

Note on installation depth:

Type of system:

Shut-off valve:

Version with lowest installation height

duo pump

Shut-off valve made of polymer

Passage seal for conduit pipe (DN): 100
Passage seal for ventilation pipe (DN): 70

Pump control: Control unit Backflow preventer: integrated Pressure pipe connection: horizontal

Motor-driven backwater flaps: 2

General characteristics

Colour: black

Standard: ÖNORM B 2501

Type of wastewater: for wastewater with and without sewage

Installation situation: underground installation

Delivery state: Pre-mounted for final assembly on site (pumps and

sensor system must be fitted on site and control

unit must be connected)

Backwater protection: Type 6
Approval: Z-53.2-493

ATEX: no
